

AKEMI® Colour Intensifier

AKEMI® Colour Intensifier is a ready-to-use, solvent-based, special impregnator containing reactive modified silicates that intensify the natural colors of honed and textured stones. The product penetrates into the pore system of the stone. A polysiloxan results from the catalytic reaction. In addition, a reaction with the siliceous substance of the stone takes place.

Product Features:

- Intensifies the natural color and structure of the stone without lustre
- Water and dirt resistant effect
- Does not form a layer on the surface of the stone
- Allows the stone to breathe
- Excellent weather resistance and durability
- Non-yellowing
- No odor during application
- For indoor and outdoor use
- After being hardened the product is harmless to health upon contact with food products

THOROUGHLY TESTED

For Use On: For the treatment of rough, porous, sawed, ground, absorbent natural and cast stones (e.g. marble, slate, limestone, granite, gneiss and concrete ashlar). There is a good durability of color enhancement on lime based stones and a very good durability of color enhancement on silicate based stones.

- Directions:**
1. The surface must be clean, totally dry and free from all residue.
 2. Apply undiluted with a brush, paint roller or spraying device. Apply a thin, smooth layer, allowing sufficient time for the product to be absorbed into the stone.
 3. Approximately 10-15 minutes after application, when the product starts to dry, distribute once more evenly or remove the excess totally with an absorbent cloth.
 4. On very absorbent surfaces, several applications may be necessary.
