

Cimex Diamond Finisher

A unique finishing system specifically designed for cement, marble, granite, terrazzo and other stone floors, the Cimex CR48 Diamond Finisher allows successive stages of stone floor preparation or restoration to be completed more rapidly and with less effort than is possible with conventional methods. The Diamond Finishing system combines the unique, patented, Cimex three-headed counter rotating system, with a selection of diamond faced finishing discs, graded from coarse to fine to accommodate newly laid floors, heavily worn or damaged stone or surface re-polishing. The generous 6.5 gallon solution tank allows for uninterrupted usage in wet applications. The unique design of this machine maintains constant pressure and avoids uneven cutting and rotational scoring often found with other floor finishing systems. The counter-rotating head system produces greater stability and eliminates the pulling action of single head machines that can lead to operator fatigue. Less fatigue means greater productivity and reduced labor costs.

THOROUGHLY TESTED

Features:

- Heavy-duty planetary motion machine with a superb polishing action.
- Even finish – unique design maintains even pressure, to avoid cutting and scoring.
- Includes one ballast weights (34lbs.) for added pressure- additional weights available.
- Solution delivered through the center of the head reduces splashing and provides even coverage.
- Interchangeable diamond faced finishing discs or bonded abrasives can be fitted to accommodate various stages of floor surfacing.
- High productivity makes optimum use of available labor even with minimal training labor.
- Vacuum port available upon request.
