

Tenax Travertine Filler

Tenax Travertine Filler is used to repair, rebuild, glue, and fill travertine, as well as similar stones. Tenax is a semisolid consistency that is smooth and easy to spread. Used to fill all size holes in travertine. It accepts a polish. Not suitable for temperatures below 32°. Buff color. Recommended for interior use.

For Use On: Travertine and similar stones. Always test a small area to check for desired outcome.

Available Sizes: 1 Liter

Product Features:

- Used to repair, rebuild, glue, and fill travertine, as well as similar stones
- Smooth and easy to spread
- Fills all size holes
- Buff color

THOROUGHLY TESTED

Directions:

Add 3% hardener (included) to the glue in a non-waxed paper cup and mix it with a tongue depressor or popsicle stick until mixed thoroughly. That would be approximately 3 drops of hardener to each tablespoon of resin. Fill the voids in your travertine with it then scrape the excess glue off so it is flush with the top of your stone and allow it to dry. The travertine filler is already a light tan color so it will match your travertine. Clean up excess or spills with a rag and either denatured alcohol or acetone. The glue will dry with gloss and you can make it a matte finish by buffing the travertine filler with coarse steel wool. If you want to make the gloss higher buff it with extra fine steel wool.
